

AMENDMENTS TO THE SPECIFICATION:

Please delete the present Abstract of the Disclosure.

Please add the following new Abstract of the Disclosure:

The present invention is a method for providing service management to network elements of a cellular communication network. The network elements communicate with an Operation and Maintenance Center of said cellular communication network by sending data having a data exchange format, where the data exchange format is translated into an Operation and Maintenance Center specific data format at a mediation server. During operation, a change in the data exchange format is identified at a mediation server, and dynamically switching from an old data exchange format to a new identified data exchange format.
